Java

```java
class Solution {
  public long minCost(String s, int[] cost) {

  }
}
```

JavaScript

```javascript
/**
 * @param {string} s
 * @param {number[]} cost
 * @return {number}
 */
var minCost = function(s, cost) {

};
```

TypeScript

```typescript
function minCost(s: string, cost: number[]): number {

};
```

C++

```cpp
class Solution {
public:
  long long minCost(string s, vector<int>& cost) {

  }
};
```

C#

```csharp
public class Solution {
  public long MinCost(string s, int[] cost) {

  }
}
```

Kotlin

```kotlin
class Solution {
  fun minCost(s: String, cost: IntArray): Long {

  }
```

```
}
```

Go

```go
func minCost(s string, cost []int) int64 {

}
```
